ABOUT ME

Software and Game Development graduate with internship experience in full-stack web development, backend development, and workflow automation. Skilled in developing responsive web applications using PHP (Laravel), JavaScript (React.js), Python, HTML, and CSS. Experienced in designing RESTful APIs, database management, and building AI-powered features for web applications. Passionate about creating scalable, user-friendly software solutions while continuously learning modern technologies.

EXPERIENCE

PT Exorty Indonesia (Internship)

Juli 2025 - Juni 2026

- Designed and implemented a RAG chatbot for a web platform using Python and n8n, improving response efficiency through internal knowledge retrieval.
- Developed an AI-powered Telegram bot with expense management and generative AI features for image and video generation.
- Developed automated web and social media data collection workflows using Python and n8n to support business research and data processing.
- Built and integrated a Python-based computer vision module for distinguishing original and recaptured images using digital image analysis techniques.
- Developed an AI image verification system capable of detecting manipulated and AI-generated images.
- Built an intelligent document extraction system to extract and classify structured information from insurance PDF documents.

School Projects

- **Public Complaint System — Laravel, MySQL, Bootstrap**

The platform includes features for filing complaints, tracking progress, leaving comments, and even voting on or liking specific complaints.

- **Library Management — React.js, Laravel, MySQL**

The web-based library management application includes features for managing books, member data, loans, fines, and returns

- **Weather App**

A simple application using React.js to fetch weather data from an external API. It displays information such as temperature, weather descriptions, and weather icons in real time based on the selected location.
